SUMMARY

AI Engineer who ships agentic, LLM-powered systems end-to-end — multi-agent pipelines, RAG applications, and MCP tool servers self-taught through building production-style AI projects and independent learning. Comfortable owning a system from architecture to production: FastAPI/Django backends, async orchestration (Celery, Kafka, Redis), and observability (LangSmith, Grafana, Docker).

EXPERIENCE

Associate Data Engineer, Bexto10x IT Solution

Nov 2025 – Present

Hyderabad, India

- Built and maintained ETL pipelines with Azure Data Factory, Python, and SQL to process healthcare data, supporting 12+ downstream reports used by 20+ internal stakeholders.
- Validated and reconciled Medical, Pharmacy, and Lab Claims plus Member Eligibility and Provider/Broker Credentialing data, improving data accuracy to 98% and reducing manual QA time by 30%.
- Automated ingestion, transformation, and monitoring workflows using Grafana, Git, and Azure DevOps, cutting pipeline failure detection time from ~4 hours to under 30 minutes.
- Partnered with business stakeholders and analysts to deliver reporting-ready datasets, shortening report turnaround time by 25%.

Data Science Intern, Digisamaskh IT Company

6 Months

Remote

- Applied Python and SQL (Pandas, NumPy, Scikit-learn) to clean and prepare marketing datasets for predictive analytics, improving model input quality across 15+ source tables.
- Built Power BI dashboards with KPI tracking and trend analysis, adopted by 10+ stakeholders for weekly operational reporting.
- Processed large-scale datasets using Spark and BigQuery, cutting query/processing time by 40% versus prior manual workflows.

PROJECTS

PDF-RAG MCP Server

Jul 2026

Python · MCP (Model Context Protocol) · FastMCP · scikit-learn

- Built an MCP server exposing local document search as callable tools (list_documents, search_documents) for any MCP client — Claude Desktop, Cursor extending the retrieval layer from my offline RAG assistant below.
- Implemented TF-IDF + cosine-similarity retrieval returning ranked, source-attributed snippets in under 50ms per query, with a swappable retrieval layer (TF-IDF → FAISS) to scale to embedding-backed search.

CodeLens — Multi-Agent Code Review System

Mar 2026

CrewAI · LangSmith · FastAPI · Celery · Kafka · PySpark · Docker | Live

- Shipped a 6-agent CrewAI system with agent-to-agent tool-use on an event-driven Kafka/Celery/Redis architecture, cutting code review turnaround time by 35% vs. manual review.
- Processed metadata and traces across 50+ repositories and 1,000+ PRs via PySpark ETL pipelines, with LangSmith tracing tool calls and inter-agent decisions.
- Containerized with Docker and deployed on a cloud VPS, maintaining 99.5% uptime in production.

Offline AI Document Assistant with Voice-Enabled RAG

May 2026

Django · RAG · Mistral-7B · FAISS · Celery · Redis

- Built a fully offline, voice-enabled RAG pipeline processing 500+ PDF documents with 90%+ retrieval accuracy, keeping all data local for privacy.
- Integrated Mistral-7B (llama-cpp-python) with FAISS vector search, cutting average query response time to under 3 seconds; added speech-to-text/text-to-speech for hands-free use.
- Ran async ingestion and vectorization via Django, Celery, and Redis, cutting document processing time by 45%.

RAG-Based PC Configuration Recommender

Sep 2025

LangGraph · FastAPI · Pinecone · Celery

- Built an agentic RAG system with LangGraph and a Pinecone vector database, returning SKU-level PC configurations with 85%+ user-rated accuracy.
- Engineered an async FastAPI/Celery/PostgreSQL backend supporting 100+ concurrent requests, with a dedicated Translation Agent for cross-lingual tool-use and LangSmith cost tracing.

Healthcare Claims Analytics & Risk Intelligence Platform

May 2026

Azure Data Factory · Python · PostgreSQL · Power BI

- Built a healthcare data platform processing 50K+ synthetic claims records across Medical, Pharmacy, Lab Claims, Member Eligibility, and Credentialing datasets.
- Automated ETL and quality-monitoring pipelines with Azure Data Factory, powering Power BI dashboards and an LLM-powered Healthcare Copilot for natural-language queries.

SKILLS

Languages: Python, SQL, JavaScript

Agentic AI / LLM: CrewAI, LangGraph, LangChain, MCP (Model Context Protocol), RAG pipelines, tool-use/function calling, vector databases (FAISS, Pinecone), LangSmith

LLMs & AI Frameworks: OpenAI API, Hugging Face Transformers, Ollama, llama.cpp, Mistral, Llama

Backend/Infra: FastAPI, Django, Celery, Redis, Kafka, Docker, Git, Azure DevOps

ML/Data: PySpark, Azure Data Factory, PostgreSQL, TensorFlow, PyTorch, Scikit-learn

EDUCATION

B.Tech, Computer Science and Engineering (AI), Dr. MGR Educational and Research Institution

Aug 2021 – May 2025

Chennai, India | CGPA: 7.82/10.0

Certifications: Machine Learning and AI (Google), Python and SQL for Data Science (Scaler)
