

AKASH J

Data Engineer | Python, SQL, ETL & Cloud Data Pipelines

+91-8590875699 | akashj0004@gmail.com | linkedin.com/in/akash-aiengineer | github.com/Akash-AIdevX | Hyderabad, India

PROFESSIONAL SUMMARY

Computer Science (AI) graduate with hands-on experience in data engineering across healthcare and analytics platforms. Strong background in Python, SQL, ETL development, and data modeling, with production experience building pipelines on Azure Data Factory, and working knowledge of Apache Spark, PySpark, and Kafka for large-scale data processing. Experienced in Git-based version control, Azure DevOps, and cloud data platforms (Azure), with exposure to Azure Databricks. Comfortable picking up new data platforms quickly, with a solid AI/ML foundation and strong motivation to grow further into Databricks and AI/ML-driven data engineering.

PROFESSIONAL EXPERIENCE

Associate Data Engineer

Nov 2025 – Present

Bexto10x IT Solutions

Hyderabad, India

- Designed and maintained ETL pipelines using Azure Data Factory, Python, and SQL to process and transform large-scale healthcare datasets (medical, pharmacy, and lab claims; member eligibility; provider/broker credentialing), ensuring high data accuracy and compliance.
- Built and refined data models to support downstream reporting, collaborating with business stakeholders and analysts to translate requirements into reliable, reporting-ready datasets.
- Automated data ingestion, transformation, and validation workflows using Git and Azure DevOps, with Grafana-based monitoring to catch data-quality issues and improve operational efficiency.
- Troubleshoot and resolved data pipeline and integration issues in a production environment, optimizing performance and reliability of ETL workflows.

Data Science Intern

6 Months

Digisamaskh IT Company

Remote

- Applied Python (Pandas, NumPy, Scikit-learn) and SQL for data preparation, cleaning, and predictive analytics on marketing datasets.
- Processed large-scale data using Apache Spark and BigQuery, supporting reproducible and scalable analytics workflows.
- Built Power BI dashboards for KPI tracking and trend analysis, translating processed data into business-ready reporting.

RELEVANT PROJECTS

Healthcare Claims Analytics & Risk Intelligence Platform | Azure Data Factory, Python, PostgreSQL, Power BI, Data Modeling

- Designed and built ETL pipelines using Azure Data Factory, Python, and PostgreSQL to ingest, validate, and transform large-scale healthcare datasets (medical, pharmacy, and lab claims; member eligibility; provider/broker credentialing).
- Developed dimensional data models and analytics marts supporting claims analytics, provider performance tracking, and executive reporting through Power BI dashboards.
- Implemented data quality monitoring and validation checks across the pipeline, improving reliability of downstream reporting.
- Added AI-driven modules for risk stratification and cost prediction, and an LLM-powered query assistant, applying ML directly within a data engineering pipeline.

CodeLens — AI-Powered Automated Code Review Platform | FastAPI, Celery, Redis, CrewAI, LangSmith, Supabase (PostgreSQL), GitHub API

- Designed an asynchronous job-processing pipeline using Redis as a job queue and Celery workers to orchestrate multi-agent CrewAI code-review runs, decoupling long-running jobs from the API request path.
- Modeled and maintained the application's data layer in Supabase (PostgreSQL) to persist review jobs, statuses, and historical outcomes, supporting auditability and fast retrieval for frontend status polling.
- Automated GitHub API workflows (fork, push, pull request creation) from within Celery workers, enabling end-to-end delivery of AI-generated review changes back to source repositories.
- Instrumented CrewAI agent runs with LangSmith tracing to automatically capture agent traces and review outcomes, feeding structured observability data into the pipeline for performance monitoring.

TECHNICAL SKILLS

Core: Python, SQL, ETL Pipelines, Data Modeling, Data Warehousing

Big Data & Processing: Apache Spark, Azure Databricks (working knowledge)

Cloud & Data Platforms: Azure Data Factory, Azure Blob Storage, Azure DevOps, PostgreSQL, MySQL, SSIS, SSRS

Reporting & BI: Power BI, DAX, Power Query, Grafana, Excel (Advanced)

Tools & Practices: Git, CI/CD, Data Validation, Agile/Scrum Collaboration

AI/ML Foundation: Machine Learning, NLP, LLMs, RAG — actively upskilling toward Databricks & AI/ML-driven data engineering

EDUCATION

B.Tech in Computer Science and Engineering (AI)

Aug 2021 – May 2025

Dr. MGR Educational and Research Institution, Chennai, India | CGPA: 7.82/10.0
