

AKASH J

Python Developer | Application Support & Cloud Engineering

+91-8590875699 | akashj0004@gmail.com | linkedin.com/in/akash-aiengineer | github.com/Akash-AldevX | Hyderabad, India

PROFESSIONAL SUMMARY

Computer Science (AI) graduate and Python developer with hands-on experience building and supporting production applications using Django, FastAPI, and Celery. Skilled in REST API design and integration, relational and NoSQL databases (PostgreSQL, MySQL, MongoDB), Git-based version control, and Docker containerization. Experienced in agile delivery, troubleshooting, and cross-functional collaboration with product and data teams. Additional exposure to cloud data pipelines (Azure) and applied machine learning/RAG systems.

PROFESSIONAL EXPERIENCE

Associate Data Engineer

Nov 2025 – Current

Bexto10x IT Solutions

Hyderabad, India

- Built and maintained Python- and SQL-based ETL pipelines on Azure Data Factory to process healthcare data (medical, pharmacy, and lab claims; member eligibility; provider/broker credentialing), improving data accuracy and reporting reliability.
- Automated data ingestion, transformation, and validation workflows using Git and Azure DevOps, and implemented Grafana monitoring to catch data-quality issues, reducing manual review effort.
- Debugged and resolved data-pipeline and integration issues in a production environment, collaborating with business stakeholders and analysts to deliver reporting-ready datasets on schedule.
- Followed version-control and CI/CD best practices (Git, Azure DevOps) while working in an agile team structure with regular stakeholder check-ins.

Data Science Intern

6 Months

Digisamaskh IT Company

Remote

- Developed Python (Pandas, NumPy, Scikit-learn) and SQL workflows for data preparation and predictive analytics on marketing datasets.
- Built Power BI dashboards with KPI tracking and trend analysis, translating raw data into operational reporting used by stakeholders.
- Gained hands-on experience with large-scale data processing using Spark and BigQuery, supporting reproducible analytics workflows.

RELEVANT PROJECTS

CodeLens — Automated Code Review & Analytics Platform | FastAPI, Celery, Kafka, Redis, PySpark, Docker, GitHub API, HTML, CSS, JavaScript

- Built REST API services with FastAPI to integrate GitHub's API and orchestrate a 6-agent automated code-review system, packaged as Docker microservices for consistent deployment.
- Designed an event-driven backend using Kafka, Celery, and Redis for asynchronous task orchestration and real-time processing across large codebases.
- Implemented PySpark ETL pipelines to ingest and transform repository metadata, and added observability/monitoring reporting for pipeline performance.
- Built a lightweight HTML, CSS, and JavaScript dashboard to visualize review metrics, agent traces, and pipeline health for engineering stakeholders.

Offline AI Document Assistant with Voice-Enabled RAG | Django, Celery, Redis, FAISS, JavaScript

- Developed a Django web application with asynchronous document processing (Celery, Redis) and a REST-style backend for real-time, offline-first document Q&A over text and voice.
- Integrated speech-to-text/text-to-speech and FAISS-based semantic search, with AJAX-driven front end (HTML, CSS, JavaScript) for a responsive chat interface.

RAG-Based PC Configuration Recommender | FastAPI, Celery, Redis, PostgreSQL, Pinecone

- Built an asynchronous FastAPI backend with Celery, Redis, and async SQLAlchemy/PostgreSQL to serve a RAG-based recommendation system at scale.
- Implemented Google OAuth + JWT authentication and integrated third-party APIs, and added observability tracing to monitor performance and token usage.

TECHNICAL SKILLS

Languages & Frameworks: Python, Django, FastAPI, Streamlit, HTML, CSS, JavaScript

Databases: PostgreSQL, MySQL, MongoDB, SQL

APIs & Integration: RESTful API design & integration, OAuth/JWT authentication, GitHub API

Cloud & DevOps: Azure Data Factory, Azure DevOps, Docker, Git, Grafana, CI/CD basics

Asynchronous & Data Processing: Celery, Redis, Kafka, PySpark, ETL Pipelines, Pandas, NumPy

AI/ML (Additional): Machine Learning, NLP, LLMs, RAG, LangChain, Hugging Face Transformers, FAISS

Practices: Software design patterns, unit testing, code reviews, Agile/Scrum collaboration

EDUCATION

B.Tech in Computer Science and Engineering (AI)

Aug 2021 – May 2025

Dr. MGR Educational and Research Institution, Chennai, India | CGPA: 7.82/10.0
